MONTHLY WEATHER MAP

SEPTEMBER 1960

General Summary of Weather Conditions

Almost the whole of Canada enjoyed warm dry weather during September. A notable exception was British Columbia which experienced temperature deficiencies of one or two degrees and there were scattered deficiencies elsewhere. The greatest temperature anomalies were in the Prairie Provinces, the southern sections of which experienced excess of two to four degrees. Southern Ontario was also warm with excesses of one to three degrees, while in southern Quebec, the Maritime Provinces and Newfoundland temperatures were normal to two degrees above normal.

The Prairies were the driest part of the country during the month, with many stations in southern Saskatchewan and the adjacent parts of Alberta and Manitoba receiving no precipitation at all during the month. Falls were locally heavy in the district around Edmonton and in parts of northern Ontario and southern Quebec, but the remainder, and by far the largest part of the country, experienced precipitation deficiencies. Southern Ontario, where precipitation is usually abundant during September, reported one of the driest months in many years.

On September 12th, 13th Hurricane Donna passed northeastward through Maine, western New Brunswick and the Gaspe Peninsula accompanied by high winds and heavy rain, although its intensity had considerably abated by the time it affected Canada.

British Columbia was the only province to experience below normal temperatures for the month of September. The first and third weeks were cool and rainy, the second week was warm and sunny along with the southern part of the British Columbia coast, while the final week was dry and sunny throughout the southern half of the province.

Precipitation totals for the month were generally below normal. Deficiencies ranging to fifty per cent on Vancouver Island and throughout most of the southern interior valleys and the northern interior. In the central parts of the province there were scattered excesses and Ocean Falls received the greatest monthly precipitation of any station in Canada, 16.39 inches, which was a thirty per cent excess.

September was a warm dry month throughout the Prairie Provinces. In southern Saskatchewan and Manitoba almost all stations reported highs for the month in the high 90's, the highest being at Gravelburg where 98 was reached. This was also the highest anywhere in Canada during the month. Mean temperatures for the month were two to four degrees above normal in southern Saskatchewan and Manitoba and normal to two degrees above normal throughout the remainder of the three Prairie Provinces, with the exception of northern Manitoba where there were deficiencies of one or two degrees.

It was the driest September on record in many locations in southern Saskatchewan. At Regina where precipitation records go back to 1884, the total of 0.11 inches recorded in September 1960 equalled the driest September on record, in 1893. A number of southern Saskatchewan stations received no precipitation at all during the month so that deficiencies ranged from sixty to one hundred per cent as they did also at a few stations in southern Alberta and southern Manitoba. There were precipitation excesses in the Edmonton area, where falls of over an inch on the 19th swelled the month's total to about twice normal, while Keg River in the Peace River district also had about twice the September average. Excesses of twenty to thirty per cent were also reported at Gillam and Brochet in northern Manitoba, while Churchill, with half the normal fall, followed the same pattern as the southern sections of the province.

September was extremely dry in southern Ontario. The monthly total of 0.31 inches recorded at Toronto was the lowest September total since observations began in 1840. New low totals for the month were also recorded at London and at Toronto(Malton Airport). Deficiencies ranged from fifty to eighty per cent throughout the southern counties of Ontario. In northern Ontario, on the other hand, there were precipitation excesses ranging to twenty-five per cent in an area stretching from New Liskeard to Sault Ste. Marie, and in a large area centred around Long Lac. By contrast, Kapuskasing and White River had a thirty per cent deficiency while in the districts of Kenora, Rainy River and Patricia there were deficiencies ranging to sixty per cent but averaging about forty per cent.

September mean temperatures were one to three degrees above normal throughout southern Ontario, while in northern Ontario most stations reported temperatures within one degree of normal.

The first ten days of September were warm in the southern districts of Quebec but cooler weather during the latter part of the month brought mean temperatures to not far from normal. Excesses ranged to two degrees throughout the St. Lawrence River valley and the Lake St. John district. In the central part of Quebec there were deficiencies of one or two degrees while in the far north Port Harrison, Chimo and Hopes Advance each reported a one-degree excess.

On September 12th and 13th Hurricane Donna moved northeastward across Maine and the Gaspe Peninsula and continued on across northern Quebec and Labrador. Although by the time it reached Quebec it had lost some of its hurricane characteristics, it was accompanied by strong winds and heavy falls of rain. A fall at Quebec City of 2.78 inches on the 12th was the heaviest noted in connection with this storm although some other stations also reported over two inches on this occasion, while at Knob Lake there was a combination of over a quarter of an inch of rain and eleven inches of snow. Rainfall from this storm swelled September totals above normal for stations in its path, excesses ranging to thirty per cent, in the Eastern Townships, fifty per cent at the mouth of the Saguenay and sixty per cent in the east-central part of the province. Aside from this storm September was generally dry in Quebec province, deficiencies amounting to about twenty-five per cent in the Montreal region and fifty per cent in the lower part of the Ottawa Valley. An area of precipitation excesses extended from the head of the Ottawa Valley eastward to Parent. In this region excesses ranged to twenty-five per cent. In the far northern part of the province the pattern was irregular, the range being from an eighty per cent deficiency at Hopes Advance to a seventy per cent excess at Fort Chimo.

In the Maritime Provinces, September was marked by a continued absence of cyclonic activity except for Hurricane Donna which passed across the northwestern corner of New Brunswick on September 13th. This storm gave rainfalls of over one inch at most stations in the Maritime Provinces and the winds approached gust speeds of 80 miles per hour in both western Nova Scotia and New Brunswick. As a result of the extra rainfall a few stations reported precipitation excesses notable Saint John which had over five inches of rain for the month. Aside from these exceptions, most recording stations showed below normal falls, deficiencies ranging to fifty per cent in Nova Scotia but averaging about thirty per cent and ranging to forty per cent in New Brunswick, averaging about twenty per cent. September was slightly warmer than normal on the average throughout the Maritime Provinces, mean temperatures at most recording points being one or two degrees above normal.

On the Island of Newfoundland, September was a month of pleasant weather. At Gander Airport the month completed a three-month period during which there was less than five inches and over 600 hours of bright sunshine. This was the driest three-month period in the twenty-four years of record at this station. Mean temperatures for the month were generally two degrees above normal on the Avalon Peninsula and along the east coast, and normal or one degree above normal elsewhere on the Island. Precipitation was light, deficiencies ranging from twenty to forty per cent on the east coast and ten to twenty per cent elsewhere except for excesses of thirty per cent at Buchans and Burgeo.

September was warm along the Labrador coast with mean temperatures ranging from normal to two degrees above normal. Very heavy rains were experienced at Cape Harrison on the first three days of the month, 4.33 inches falling on the second, and 7.49 over the three-day period. This phenomenal total raised Cape Harrison's precipitation to 11.4, much greater than any other station in the eastern half of the country. Precipitation was also unusually heavy at Goose which recorded a ninety per cent excess but all other stations along the Labrador coast recorded deficiencies ranging to forty per cent.

In the Yukon Territory September temperatures averaged within one degree of normal at all stations. Precipitation was near normal along the southern edge of the Territory but at Whitehorse, Aishihik and Snag there were fifty per cent deficiencies.

Throughout most of the Northwest Territories September mean temperatures were within one or two degrees or normal. On the Arctic Archipelago most stations reported temperature excesses of which the greatest was four degrees at Eureka. Aside from small deficiencies at Fort Good Hope and Port Radium stations in the districts of Mackenzie and Keewatin experienced precipitation excesses ranging to one hundred per cent. On the Archipelago Holman Island had three times, and Cambridge Bay had twice the normal fall. There were excesses ranging to fifty per cent in the eastern Arctic, and deficiencies of twenty to seventy per cent in the west.

DECEMBER 1960
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
